Figure 1: A diagram showing a sequence of events over time. The horizontal axis represents time, with a vertical line indicating the present. The vertical axis represents the state of the system. The diagram shows a sequence of events, with the first event occurring at the present time and the subsequent events occurring at later times. The events are represented by points on the vertical axis, with the first event being the most prominent.

Figure 2: A diagram showing a sequence of events over time. The horizontal axis represents time, with a vertical line indicating the present. The vertical axis represents the state of the system. The diagram shows a sequence of events, with the first event occurring at the present time and the subsequent events occurring at later times. The events are represented by points on the vertical axis, with the first event being the most prominent.

Figure 3: A diagram showing a sequence of events over time. The horizontal axis represents time, with a vertical line indicating the present. The vertical axis represents the state of the system. The diagram shows a sequence of events, with the first event occurring at the present time and the subsequent events occurring at later times. The events are represented by points on the vertical axis, with the first event being the most prominent.
